Professional Summary

A Physical Design Engineer pivoting to software engineering. Graduated with a degree in math and physics, however was highly impacted by programming classes in college because it scratches the problem solving itch along with a lifelong interest in computers and electronics. While primarily focused on software engineering positions, an excellent addition to any engineering team with the ability to understand complex problems and work with a team across different levels of abstraction.

Areas of Expertise

Problem Solving

Strategic Planning

Technical Writing

Cross-functional Collaboration

Data Analysis

Critical Thinking

Technical Skills

Python, C, Go, SQL, Docker, Version Control(Git), REST APIs, CAD, Autodesk Inventor, Fusion 360, SEM (Helios G4 DFIB), LVS/ DRC verification, circuit layout, synopsis, machine shop manufacturing.

Professional Experience

Physical Design Engineer | Nanya Technology

- Executed physical design by transforming symbolic schematic descriptions into optimized physical layouts.
- Performed Layout Versus Schematic(LVS) and Design Rule Check (DRC) verification to ensure design integrity for increased percentage yield of viable chips per batch
- Resolved micro-scale layout challenges while maintaining focus on macro-level project objectives and long-term design goals through the full life cycle of 3 market ready chips

Failure Analysis Engineer Intern | Coherent Corp

- Operated Helios G4 DFIB Scanning electron microscope (SEM) for semiconductor failure analysis and defect diagnosis
- Designed, assembled, and tested thermal microscope system for integration into the failure analysis diagnostic tool-kit.
- Developed comprehensive operating procedures and safety protocol for thermal microscopy equipment

Education

Bachelors of Arts in Mathematics and Engineering Physics

Austin College | Aug 2018 - May 2022

3 - Year Academic All American, NCAA Division 3 Water Polo Team Member

Back-End Development Certification

Boot.dev | April 2026

Projects

Terminal Chess with Golang | <https://github.com/MrBushido-002/chess-in-golang>

A Player versus player chess app for the terminal. A Web server with a Rest API stores all necessary information about games and players in a SQL database allowing players to play a fully functional game of chess including move verification, check and check mate verification, as well as unique interactions such as En Passant. Replays of games can even be viewed once complete.

Mechanical Focus Assist

Designed and 3D printed a mechanical focus assist for the data collecting camera for Austin College's Adams observatory. Fine tuning was done based on design constraints and parameters.

HUNCH international space station lockers

Developed CAD Models for the international space station locker system using Autodesk inventor and old engineering drawings.

Conway's Game of life | <https://github.com/MrBushido-002/Conways-game-of-life>

Simulation program using python and the pygame library
